

Presentation Title: UNDERWATER TURBINE

Presentation Type: Presentation

About My Project: There is a need for the advancement of the renewable energy extracting techniques and an accelerated form of energy extraction to promote and meet the needs of global energy requirements.

Water Current energy is eligible as one of the most productive renewable and clean energy source with the promise of a regular and predictable production of light and electricity. Being able to get (energy) cleanly in a way that's not going to harm the natural resources around us, whether it's wildlife, or whether it's the entire planet through the use of fossil fuels and global warming.
